EDUCATION

Wake Forest University

Winston-Salem, NC

Bachelor of Science in Computer Science | Entrepreneurship Minor

December 2025

Courses: SQL & Database Management | Python for Data Analysis | Probability & Statistics | Regression Analysis
Data Visualization | Data Science | Data Structures | Linear Algebra | Algorithms & Analysis | Computer Systems I

TECHNICAL SKILLS

Languages: Python, SQL, R, Java, JavaScript, TypeScript, C, HTML, CSS, Bash

Data Analysis & Visualization: pandas, NumPy, scikit-learn, Tableau, Power BI, Matplotlib, Seaborn, Excel

Databases: PostgreSQL, MySQL, MongoDB

Analytical Techniques: Hypothesis Testing, Regression Analysis, A/B Testing, Data Cleaning

EXPERIENCE

Undergraduate Data Research Fellow

May 2025 – January 2026

Wake Forest University

Winston-Salem, North Carolina

- Processed and cleaned a large dataset of Amazon rainforest aerial imagery using Python, creating structured labeled datasets for analysis
- Executed SQL queries to track model experiment results, logging hyperparameters and performance metrics (precision, recall, mAP) across multiple training runs
- Collaborated with interdisciplinary faculty to design experiments, perform quantitative analysis, and present findings at URECA Day
- Automated object detection pipeline to identify palm trees in unseen images, reducing manual annotation time and improving reproducibility
- Built data preprocessing workflows to filter and structure image patches, enabling efficient model training on 1,200+ samples

Data Analyst Intern

May 2024 – August 2024

The Clearing House

New York, New York

- Engineered end-to-end data pipeline using Python, Pandas, and Jupyter Notebook to process one year of CHIPS financial transaction data, handling missing values with placeholder strategies and cleaning inconsistent records
- Leveraged SQL to save model predictions and actual results in a database, making it easy to compare performance for different models
- Cleaned and prepared transactional data, filling in missing values, and built a forecast that achieved over 85% accuracy for banks processing 90% of U.S. wire transactions
- Presented model results and insights to 50+ stakeholders including executives and senior leadership as part of final project

Operations Data Intern

May 2023 – August 2023

Atlantic General Construction

New York, New York

- Used Excel to track project timelines, budgets, and client requirements, maintaining organized spreadsheets for daily workflow management and reporting
- Communicated with clients and cross-functional teams to gather requirements, document progress, and resolve 5–10 weekly inquiries, ensuring project transparency and stakeholder satisfaction
- Analyzed project data in Excel to identify workflow bottlenecks, reducing task completion delays by approximately 17% through targeted process improvements

PROJECTS

Customer Churn Driver Analysis

Personal Project

- Used MySQL to analyze customer data, examining factors such as subscription type, contract length, etc
- Built interactive Power BI dashboard showing churn rates by customer segment
- Identified key churn indicators including subscription type and support call frequency

Cancer Incidence and Socioeconomic Data Analysis

Wake Forest University

- Cleaned and merged CDC cancer incidence data with Census median household income data using Python
- Performed exploratory analysis and linear regression to examine correlation between income levels and cancer rates, identifying statistically significant negative relationship
- Built data visualizations using Matplotlib and Seaborn to illustrate geographic and income-based trends
